BASLER
FAMILY CHIROPRACTIC

OUR EXPERIENCE HAS SHOWN THAT IT IS BENEFICIAL TO HAVE A GREAT UNDERSTANDING WITH OUR CLIENTS AS TO WHAT GONSTEAD CHIROPRACTIC IS, THE VALUES OUR OFFICE HOLDS AND FEES FOR SERVICE. PLEASE READ EACH SECTION, INITIAL ALONG THE SIDE AND SIGN AND DATE AT THE BOTTOM.

Chiropractic is based on the science which concerns itself with the relationship between structures (primarily the spine) and function (primarily of the central nervous system - CNS) and how this relationship can affect the restoration and preservations of health. The Gonstead Chiropractor goes beyond by conducting a thorough analysis of your spine using five criteria to detect the presence of the vertebral subluxation complex. Spinal adjustments are performed to correct or reduce spinal joint (vertebral) subluxations. Vertebral subluxation is a disturbance to the CNS and is a condition where one or more vertebra in the spine is misaligned and/or does not move properly causing interference and/or irritation to the CNS. The primary goal in chiropractic care is by application of a precise movement and/or the force into the spine to reduce and/or correct vertebral subluxation(s). There are several different methods or techniques by which the chiropractic adjustment is delivered, typically delivered by hand.

At Basler Family Chiropractic (BFC), we do not diagnose or treat any disease or condition other than vertebral subluxation and the doctor/office will not be held responsible for any pre-existing medical conditions. To the best of my ability, the information I have supplied is complete and truthful. I have not misrepresented the presence, severity or cause of my health concern. Initial here _____

While Chiropractic treatment is remarkably safe, you need to be informed about the potential risks related to your care to allow you to be fully informed before consenting to treatment. Chiropractic care, like other forms of health care, holds certain risks. While the risks are most often minimal, in rare cases, complications such as sprain/strain, irritation of a disc condition, and although rare, minor fractures, and possible stroke, which occurs at a rate between one instance per million to one per two million, have been associated with chiropractic adjustments. Chiropractic is a separate and distinct healing art form and does not proclaim to cure any named disease or entity. We strive to provide you with the very best care and if the results are not acceptable, we will refer you to another provider who we feel can further assist you. Treatment objectives as well as the risks associated with chiropractic adjustments and all other procedures provided at BFC have been explained to me to my satisfaction and my initials convey my understanding of both. PRIVACY POLICY

It is the desire of this office to provide chiropractic care in an "open-door" adjusting environment. An "open-door" approach involves the doctor moving from patient care area to patient care area and leaving the doors between patient care areas open at times. As a result, patients are occasionally within sight of one another and some ongoing routine details of care are discussed within earshot of other patients and staff. This environment is used for ongoing care and is NOT the setting used for taking patient histories, performing examinations, or presenting report of findings- these procedures are completed in a private confidential setting.

This office is required to notify you that by law, we must maintain the privacy and confidentiality of your personal health information. You may request a copy of the Privacy Policy and understand it describes how your personal health information is protected and released on your behalf for seeking reimbursement from any involved third parties.
